

**SCHOOL BECOMES SAFER.
ALSO FOR THE FLOOR.**

floorsafe[®]

FLOORSAFE® LEARNING BEQUEATHS MORE THAN JUST KNOWLEDGE.

The school undergoes constant change: the coming and going of curriculums, students, and furniture. But one constant remains: the floor.

The floor has to hold out for a long time and withstand continuous wear and tear, especially in the classrooms. Both the chairs and the students who sit on them stress the floor constantly, leaving visible marks. As a result, repairs and replacements are costly.

A2S floorsafe® solves this problem. The qualities of the innovative glider are comparable with those of a sneaker:

- it provides optimal distribution of pressure,
- is silent, and
- has a highly robust sole.

ADVANTAGES

Protects the floor due to the complete contact of the glider to the floor.

Tipping without slipping due to anti-slip components.

Large contact area also during tipping

Screwed from on top.

- 1 Enlarged area of contact during tipping acts as an intermediate buffer.
- 2 Screwed from on top; prohibits scratching if screws are loose.
- 3 Tread protection as covering for pipe.
- 4 Large floor protectors, made of felt and plastic.

VERSIONS

With felt: for linoleum and other smooth floors.

With plastic: for textile floor coverings.
